

HANGER (optional)

How to make your 3D frame

1. Cut along the solid lines (frame and hanger, cut out the hole).
2. Glue your photo or picture in the middle (max 9 x 9 cm).
3. Fold the dashed lines. Each side becomes a little square tube: wall up, front flat, side down, back under.
4. Glue each glue tab under the photo, one side at a time.
5. Tuck the small corner flaps under the next side and glue.
6. To hang: put double-sided tape on the back and press it on the wall. Or glue the optional hanger to the back and use a pushpin.

Print at 100% (Actual size) on US Letter or A4.
Solid line = cut Dashed line = fold
Tip: use cardstock (160–200 gsm). Press the fold lines with a ruler and an empty ballpoint pen first for neat folds.
